STUDENT ENROLLMENT AND COURSE MANAGEMENT SYSTEM

A Business-Oriented System Proposal for
The Chai Shop & Co

PROJECT REPORT

A structured digital platform to manage employee training, course enrollment, schedules, progress, assessments and certificates.

Prepared for academic / business project presentation

1. Introduction

The Student Enrollment and Course Management System is a centralized digital solution designed to simplify the complete learning and training lifecycle. In the context of The Chai Shop & Co, the system can manage employee training, onboarding programs, skill-development courses and internal learning activities.

As a growing food-and-beverage business, The Chai Shop & Co may have multiple outlets, employees, roles and training requirements. Manual processes using notebooks, spreadsheets or separate messages can make it difficult to track who has enrolled, which course is assigned, whether training is completed and who is eligible for certification.

The proposed system brings these activities into one platform. Managers can create courses, assign learners, monitor attendance and progress, conduct assessments and generate reports. Learners can view available courses, enroll, access learning materials and track their own progress.

Objectives

- Create a single digital record for learners and their training activities.
- Make course enrollment simple, transparent and organized.
- Help managers schedule training and monitor completion.
- Track assessments, scores, certificates and learning progress.
- Generate useful reports for business and training decisions.
- Improve consistency of service, safety and operational knowledge across outlets.

2. Core Features & System Modules

The proposed system is divided into five major modules. Each module handles a specific part of the learner and training lifecycle while sharing information with the other modules.

Module	Main Purpose	Key Functions
Module 1 – User & Learner Management	Maintain learner information	Registration, profiles, roles, outlet assignment, login
Module 2 – Course Management	Create and organize training	Course creation, categories, materials, prerequisites
Module 3 – Enrollment & Scheduling	Manage participation	Enrollment, approval, batch allocation, timetable, notifications
Module 4 – Learning, Assessment & Certification	Measure learning outcomes	Lessons, attendance, quizzes, scores, completion, certificates
Module 5 – Reports & Administration	Support management decisions	Dashboards, reports, user control, audit records, system settings

System Roles

Role	Responsibilities
Learner / Employee	View courses, enroll, attend training, complete assessments and track progress.
Trainer	Deliver training, record attendance, upload materials and evaluate learners.
Manager / HR	Approve enrollments, assign courses, monitor completion and review reports.
Administrator	Manage users, courses, permissions, settings and system data.

Module 1: User & Learner Management

This module creates a reliable digital profile for every learner. For The Chai Shop & Co, the learner can represent a staff member, trainee, new joiner or supervisor participating in a structured training program.

Core Functions

- New learner registration and secure login.
- Profile containing name, employee/student ID, role, outlet and contact details.
- Role-based access so each user sees only relevant features.
- Employee onboarding checklist and assigned training plan.
- Search and filter learners by outlet, role, course or completion status.
- Status tracking such as Active, In Training, Completed or Inactive.

Example Use Case

When a new staff member joins The Chai Shop & Co, the manager creates or imports the learner profile. The system assigns mandatory onboarding courses such as company orientation, customer service, food safety and workplace procedures. The learner can then access the assigned courses from a personal dashboard.

Benefits of Module 1

Benefit	Result
Centralized profiles	Less duplicate data and easier employee tracking.
Role-based access	Improved privacy and controlled system usage.
Outlet mapping	Managers can identify training needs by branch.
Digital onboarding	New employees receive a consistent learning path.

Module 2: Course Management

The Course Management module allows authorized staff to design, organize and maintain training programs. Courses can be created for different roles such as cashier, kitchen staff, service staff, shift supervisor or store manager.

Course Structure

Component	Description
Course Title	Clear name such as Customer Service Excellence.
Category	Operations, Safety, Service, Product Knowledge, Leadership, etc.
Learning Content	Videos, documents, presentations, instructions and reference material.
Duration	Expected learning time and session duration.
Prerequisites	Courses or skills required before enrollment.
Assessment	Quiz, practical evaluation or trainer review.
Completion Rule	Conditions required to mark the course complete.
Certificate	Digital certificate issued after successful completion, where applicable.

Possible Courses for The Chai Shop & Co

1. Company Orientation & Brand Values 2. Customer Service Skills 3. Food Safety & Hygiene 4. Beverage & Product Knowledge 5. POS & Billing Basics 6. Workplace Safety 7. Inventory Handling 8. Team Leadership

Module 3: Enrollment & Scheduling

This module manages the transition from course selection to actual participation. It prevents confusion around available batches, trainer schedules and learner capacity.

Enrollment Flow

Step	System Activity
1. Course Discovery	Learner sees available or assigned courses.
2. Enrollment Request	Learner selects a course or receives an assignment.
3. Approval	Manager/HR approves where approval is required.
4. Batch Allocation	System places learner into an available training batch.
5. Schedule	Date, time, trainer and venue/online mode are displayed.
6. Notification	Learner receives reminders and schedule updates.
7. Attendance	Trainer records participation.
8. Completion	System updates learner status after requirements are met.

Scheduling Features

- Trainer availability and session calendar.
- Maximum batch capacity to avoid overbooking.
- Attendance recording and absence tracking.
- Automated reminders for upcoming sessions.
- Rescheduling and cancellation records.
- Outlet-wise training calendar for managers.

Module 4: Learning, Assessment & Certification

This module ensures that enrollment is not treated as completion. It records actual learning activity and verifies whether the learner has achieved the required outcome.

Learning & Assessment Functions

- Course lessons and learning materials.
- Progress percentage and completed-topic tracking.
- Quizzes and knowledge checks.
- Trainer-based practical evaluation.
- Attendance and participation records.
- Pass/fail or completion criteria.
- Certificate generation for eligible learners.

Example Assessment

Training Area	Assessment Method	Success Indicator
Customer Service	Scenario-based quiz + trainer observation	Required score and satisfactory service behavior
Food Safety	Knowledge quiz + practical checklist	Pass mark and completed checklist
POS & Billing	Practical demonstration	Correct transaction process
Product Knowledge	Online quiz	Minimum required score
Leadership	Case study + trainer evaluation	Competency requirements met

Certification

Once all required conditions are completed, the system can generate a digital certificate containing the learner name, course name, completion date, certificate ID and authorized trainer/manager details.

Module 5: Reports & Administration

Management needs clear information to understand whether training programs are being completed and where additional support is required. The reporting module converts system data into useful dashboards and reports.

Key Reports

Report	Purpose
Enrollment Report	Shows learners enrolled in each course or batch.
Completion Report	Identifies completed, pending and overdue training.
Attendance Report	Tracks participation and absences.
Assessment Report	Shows scores and pass/fail status.
Outlet Training Report	Shows training status by business location.
Course Performance Report	Shows enrollment, completion and assessment statistics.
Certificate Report	Maintains issued certificate records.
Learner Progress Report	Provides an individual learning history.

Administration Features

- User and role management.
- Course and category configuration.
- Permission control.
- Data backup and audit history.
- Notification settings.
- Search, filters and export-ready reports.

Suggested Dashboard

A manager dashboard can display total learners, active courses, upcoming sessions, pending enrollments, completion status and assessment summaries. The dashboard should present information clearly so managers can act quickly.

3. Customer Journey Workflow

Although the platform is called a Student Enrollment and Course Management System, the learner journey can be designed around the day-to-day training needs of The Chai Shop & Co. The journey below shows how a new employee moves through the system.

Stage	Learner Experience	System / Business Action
1. Discover	Learner receives access and sees assigned courses.	HR/Manager creates profile and training plan.
2. Register / Login	Learner signs in and checks profile.	System authenticates user and loads dashboard.
3. Explore	Learner views course details and schedule.	System displays duration, prerequisites and batch information.
4. Enroll	Learner requests or accepts enrollment.	Manager approval is captured if required.
5. Attend	Learner attends online/offline session.	Trainer records attendance.
6. Learn	Learner completes lessons and materials.	System tracks progress.
7. Assess	Learner completes quiz/practical assessment.	Scores and evaluation are stored.
8. Complete	Learner satisfies all requirements.	System marks course completed.
9. Certify	Learner receives certificate if applicable.	Certificate ID and completion record are generated.
10. Follow-up	Manager reviews learning status.	Reports help identify future training needs.

Workflow Summary

Profile → Course Discovery → Enrollment → Scheduling → Attendance → Learning → Assessment → Completion → Certification → Reporting

4. Business Benefits for The Chai Shop & Co

A structured training system can support the operational needs of a growing food-and-beverage business by creating a consistent, measurable and organized learning process.

Business Benefit	How the System Helps
Faster Onboarding	New employees can receive predefined training paths from their first day.
Consistent Service Standards	All learners can receive the same core service and operational training.
Better Training Visibility	Managers can see pending, active and completed training in one place.
Reduced Administrative Work	Enrollment, attendance and progress records are stored digitally.
Improved Accountability	Learners and managers can clearly see assigned requirements and deadlines.
Scalable Across Outlets	The same course structure can be reused across multiple locations.
Data-Based Training Planning	Reports help identify common gaps and future training requirements.
Employee Development	Optional skill courses can support continuous learning and role growth.
Record Keeping	Digital completion and certificate records make audits and internal reviews easier.

Conclusion

The Student Enrollment and Course Management System provides a practical digital framework for managing learning from registration to certification. For The Chai Shop & Co, it can transform employee training into a structured process that is easier to administer, monitor and scale. By combining learner management, course creation, enrollment, scheduling, assessment and reporting, the proposed system creates a single source of truth for training activities.

Final Outcome: A simple, organized and scalable learning-management workflow that supports people, training and business operations.
